- 2. DIS 24V (terminal numbers TB9 and TB27) of the MELSEC-A series side is connected to FUNC 24V of QD62-H01/H02. When disable input is used at 12V, use is enabled by connecting the DIS 24V (terminal numbers TB9 and TB27) wiring to terminal numbers TB36 and TB38. (Refer to the figure on the right.) Because the external input specifications differ, the specifications of the external device need to be checked.
- 3. Program changes (changes to the number of occupied input/output points, input/output signals, and buffer memory addresses) are required

5. For detailed and general specifications not stated in the Specification Comparison Chart, refer to the user's manual of the module used. In addition, we recommend that you also refer to the document L(NA)08045, "Guidelines: Replacing MELSEC-A/QnA (Large-Size) Series with Q Series (Intelligent Function Module)." For those sections in which the MELSEC-A series specifications and MELSEC-Q series specification differ, specification restrictions may apply upon replacement. Check the specifications of the connected devices.

PRST 24V (terminal numbers TB12 and TB30) of the MELSEC-A series side is connected to PRST 24V of QD62-H01/H02. When preset input is used at 12V, use is enabled by connecting the PRST 24V (terminal numbers TB12 and TB30) wiring to terminal numbers TB18 and TB37. (Refer to the figure on the right). Because the external input specifications differ, the specifications of the external device need to be checked
